Chapter 1. Introduction

This document lists all of the available Range measurements and their properties pertaining to NAVlib. Similar documents can be found for NCOM and BCOM measurements.

Range streams are output from the RT-Range system. They are also often named RCOM streams.

1.1. Format

Each available measurement has the following attributes:

Name	Internal name of the measurement, used to configure the measurement in the datastore.
Short Name	A more descriptive name than the internal name but without spaces.
Full Name	Full descrptive name of the measurement.
Units	Default units of measurement.
Public	Used by OxTS application to determine if the measurement is displayed to the end user.
Graphable	Used by OxTS application to determine if the measurement can be used within a graph plot.
Type	Type of the measurement.
